INTELLIGENT LIGHTING

Intelligent lighting at your fingertips

Our new smart lighting range has built-in software that you can control remotely for an easier, efficient and personalised way of using your lights.

No need for a hub or complex installations. Simply download the SaxbySmart app to configure the lights your way, directly from your smartphone or using your own voice on smart home voice recognition products, such as Amazon Echo or Google Home.

"Alexa, turn on the lights"

SaxbySmart is compatible with Amazon Echo and Google Home allowing you to control the lights directly using your own voice.

WORKS WITH
amazon alexa

works with the
Google Assistant

How to get started:

- Install the SaxbySmart app.
- Register your account and add your lighting devices.
- You're good to go - create a personalised lighting experience for each room with SaxbySmart.

Available on the iPhone

RECESSED

Recessed downlights are a subtle and interesting way to add a modern feel to your home. Saxby Lighting's recessed range covers all your domestic and commercial needs.

SHIELDECO 500

The SHIELDECO is a revolutionary Fire Rated dimmable LED downlight in both performance and installation. Utilising the tool-less fast fix 4 way loop in loop out connection system, the whole product can be fully wired and installed in a matter of seconds. Available in 4w 500 lumen and 8.5w 820 lumen and in both fixed and tilt versions. Owing to its unique construction and heat dissipation the product can be covered directly with insulation when installed in the ceiling. Suitable for both domestic and commercial applications this IP65 range of downlights are available in white, satin nickel and polished chrome.

SIRIO FRAME

The Sirio Frame is an innovative luminaire providing a decorative frame of light. The square panel outline designed for the ceiling, illuminates an indoor space just as effectively as the more common full panel. The fire barrier is mantained as the ceiling tile is in place. It offers a high lumen output of 3600 lumens and a longer life span as there is no discolouring concern, but still with a beam angle of 120°. Ideal for commercial applications.

BLAINE

DEYES

The Blaine is a UGR19 LED recessed module and is designed to produce direct and indirect light reducing glare and enhancing visual comfort, suitable for T bar ceiling systems and comes in a neutral matt white finish. The 4000K LEDs emit a clear, bright light which perfect for any modern office or retail environment, with high lumen output of 4700 lumens. Emergency version available.

The Deyes recessed LED panel is constructed with a special grille design that keeps glare and discomfort to a minimum. It is both UGR13 and boasts a high lumen output of 115lm per watt. The Deyes will directly replace T5 and T8 fluorescent luminaires and is an ideal solution for offices, schools and other commercial applications. Available in 3 Hour Emergency option.

ECOLINEAR

A direct LED replacement for 35W T5 fittings. The EcoLinear 5ft batten is instant on and flicker free, with each unit supplying 2500 lumens of even and bright cool white light and only using 22W whilst offering a 140° beam angle. The EcoLinear also benefits from an easy and quick installation with the use of the supplied suspension clips to aid with installation. Super slim casing with improved thermal management due to its aluminium extrusion.

RULAR

The Rular offers a direct replacement for the standard T8 fluorescent batten and has been designed with the installer in mind, the simple clip on diffuser combined with the loop in loop out push fit terminals as well as BESA entry points and knockouts make it incredibly fast and simple to install. Comes with a 5 year warranty as standard. Using the latest LED technology coupled with high performance light diffusion materials to eliminate LED spots. The Rular is available in 4ft, 5ft and 6ft in both standard and high lumen output. Also available in 3 hour emergency option.

REEVE 2

A direct LED replacement for twin 35W T5 fittings, this self contained anti corrosive LED batten has sealed end caps, ensuring its IP65 rating. The Reeve 2 benefits from an easy and quick installation with the use of the supplied stainless steel suspension clips to aid with wiring. Plus can be wired from a central wiring point due to the groove along the back of the fitting to hide the cable for a clean finish.

IP65 RATED

- Opal & gloss white polycarbonate finish
- 1.5m cable included

ALTUM

The Altum LED Highbay produces a market leading 130lm/W. Supplied as standard with 1 - 10V dimmable flicker-free driver. It features an IP65 rated die-cast aluminium body for an enduring build-quality suited to industrial environments. Energy savings of up to 65% compared to Metal Halide, while maintenance costs are also significantly reduced thanks to a high thermal efficiency aluminium heatsink that leads to a low operating temperature and greater heat dissipation. Optional accessories include Microwave sensors, adjustable installation bracket, remote control and a choice of diffusers.

LUIK CASING

The Luik range is a tough and robust bulkhead luminaire, constructed from die-cast aluminium with a durable powder coating finish and a polycarbonate diffuser. The light fitting also benefits from an IP65 rating and an IK10 impact rating. Easy to install, available in plain, eyelid and grill bezel, with options of emergency, microwave sensor. The Luik is ideally suited for public buildings, car parks to industrial facilities, in both exterior and interior applications. Available in a choice of finishes.

CREATE YOUR PERFECT LUIK BULKHEAD

1. Firstly choose your style and colour from our plain, eyelid and grill options, which are all available in black, white or grey.

2. Then pick your gear tray, the options are standard, microwave, emergency or microwave emergency.

SEVERUS BLACK

The Severus is a range of surface mounted LED guide lights, which are quick and easy to fit. Manufactured from polycarbonate, they are the ideal choice for coastal locations. Available in a choice of direct and indirect light, design and finish. The clever design means that you can now fit guide lights when you are not able to cut holes in your wall. The slim profile and integrated driver allows us to keep the projection from the wall to a minimum and the IP rating is ensured by the gasket and the diffuser when it is fitted into place. The outer cover simply clips into place to complete the installation.

IKONPRO CCT
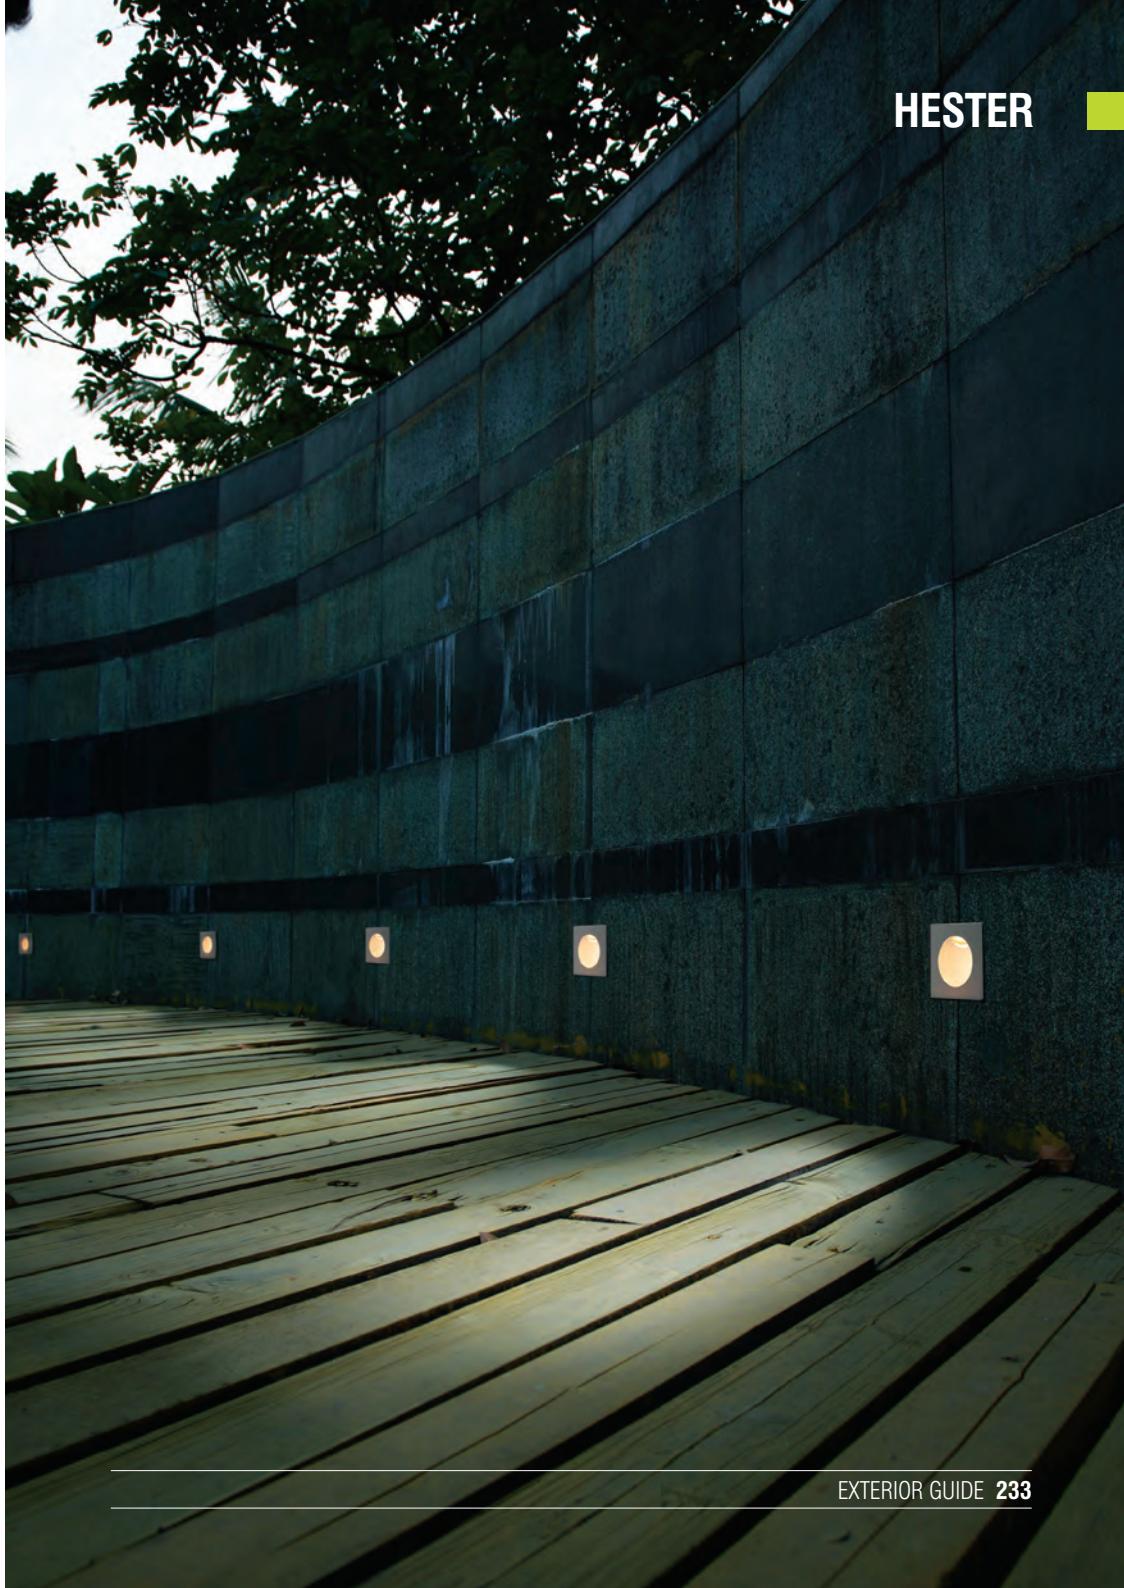

An addition to the popular IkonPRO recessed LED decking kit range, within each head there is a choice of colours. Featuring the unique design of removable and interchangeable heads, to change colour you simply turn the head 180º and reinsert into the loom. The Fresnel lenses improve lumen output, diffusing the spread of light evenly. Designed to be fitted and wired during the decking build stage without the heads, the supplied rubber caps protect the fitting from the elements until the decking is complete. Each individual IP67 head then simply plug in, adding the final touches to the decking design. Available in a variety of sizes and colours.

IKONPRO

Fitting the IkonPRO couldn't be easier....

The clever design of the IP67 connector means that you can mix the different colours and sizes too. Use the Ikon Pro heads to indicate a change of level or zone. The extension cable can be fitted between the driver and the first loom or between the two looms enabling you to configure your product perfectly.

IkonPRO inline sensors have been added to the range, PIR presence detectors and photocell twilight detector.

- Constructed from stainless steel (304) & polycarbonate

PIR PRESENCE DETECTOR
- 30 lux on, 30 lux off. 115 degree 1.5m detection range, 5 minutes ±1min off after no movement

TWILIGHT DETECTOR
- 30 lux on, 30 lux off.

IKONPRO RGB

The IkonPRO extends the Ikon recessed decking kit range, with its unique design of removable and interchangeable heads. The new Fresnel lenses improve lumen output, diffusing the spread of light evenly. Designed to be fitted and wired during the decking build stage without the heads. The supplied rubber caps protect the fitting from the elements until the decking is complete. Each individual IP67 head easily connects and can be placed into position quickly, adding the final touches to the decking design. There are three head sizes to choose from for the RGB kit.

BODENN

The Bodenn is a robust, mains operated ground light which is constructed from marine grade stainless steel (316) and is IP67 rated, making it ideal for coastal areas. The plastic exterior is to be fitted into the ground and then the light simply screws in on top. It is ideal for lighting up paths and driveways. Can also be used as a decking light without using the plastic casing.

E27 SMART

The E27 Smart is a dimmable tuneable white LED lamp. With a range from 2700K to 6500K this lamp is ideal for creating the right ambience. This smart lamp can all be controlled via the SaxbySmart app, allowing you ultimate control with your lighting, whether it's changing colour, dimming, switching on and off or using the timer set up feature. It is also compatible with Amazon Alexa and Google Home to allow you to control your lights with your voice.

MICROWAVE & PIR PRESENCE DETECTORS

Discrete surface mounted sensors that react to any movement in range. The Microwave presence detector has a 360° detection angle and range of 5 metres when ceiling mounted and 10 metres when wall mounted, the unit can control a 800W resistive load and 200W of driver load. The PIR presence detector has a 360° detection angle and range of 6 metres, the PIR can control a 1600W resistive load and 500W of driver load. Both perfect for low use areas, such as corridors, and it is ideal for energy saving applications.

Abbreviations

◆ H: Height ◆ W: Width ◆ L: Length ◆ D: Depth ◆ Proj: Projection ◆ Dia: Diameter

◆ Sq: Square ◆ K: Kelvin ◆ Lm: Lumens ◆ Lm/W: Lumens per Watt

Lamp Temperature

When thinking about lamp and fitting choice it's important to understand that every light source has two distinct elements. The first part is brightness which is measured in lumens; this is a measure of the amount of light that it will give out.

The second part is the colour temperature, which is measured in kelvin and indicates how cool or warm the light is. Warmer fittings and lamps have low kelvin numbers, whereas cooler lamps and fittings will have a kelvin that is high. Choosing the right fitting or lamp helps to create the right effect within your chosen room.

WARM white				**COOL** white			**DAYLIGHT** white	
1000	2000	3000	4000	5000	6000	7000	8000	9000

WARM white (<3800k)

WARM — Warmer whites are generally preferred for creating a more relaxed environment in dining, living or reception areas.

COOL white (3900k to 5800k)

COOL — Cool white is a good choice for retail and office environments where a simulated natural, outdoor light is preferred. Use in modern contemporary kitchens and bathrooms to complement the décor.

DAYLIGHT white (>5900k)

DAYLIGHT — Perfect for industrial and healthcare applications where the most natural lighting is required.

Finding your LED equivalent

LED	3W	5W	7W	9W	12W
INCANDESCENT	25W	40W	60W	75W	100W
HALOGEN	18W	28W	42W	55W	70W
LUMENS	200	400	600	800	1000
CFL	5W	8W	12W	15W	20W

Ingress Protection (IP) Rating

Each light within our brochure has been given an appropriate IP rating; this relates to the degree of protection the light provides against solid object and water ingress. IP ratings are relevant to anywhere that moisture is prevalent, such as bathrooms, utility rooms and exterior environments. Written as IPxx, the first x defines the level of protection offered from dust; the second x defines the level of protection offered from moisture. The higher the numbers are, the better the protection will be.

INGRESS PROTECTION

IP65

SOLID OBJECT

1	Protected against a solid object greater than 50mm such as a hand
2	Protected against a solid object greater than 12.5mm such as a finger
3	Protected against a solid object greater than 2.5mm such as a screwdriver
4	Protected against a solid object greater than 1mm such as a wire
5	Dust protected. Limited ingress of dust permitted. Will not interfere with operation of the equipment
6	Dust tight. No ingress of dust

MOISTURE

1	Protected against vertical falling drops of water. Limited ingress permitted
2	Protected against vertical falling drops of water with enclosure tilted up to 15 degrees from the vertical. Limited ingress permitted
3	Protected against sprays of water up to 60 degrees from the vertical. Limited ingress permitted
4	Protected against water splashes from all directions. Limited ingress permitted
5	Protected against jets of water. Limited ingress permitted
6	Protected against powerful jets of water. Limited ingress permitted
7	Watertight against the effects of immersion in water between 15cm and 1m for 30 minutes
8	Watertight against the effects of immersion in water under pressure for long periods

Choose the right IP rating for your location

In most cases a product with a rating of IP44 will be suitable for the majority of locations, but there are certain circumstances where a lower or higher rating would be more appropriate. For products fitted in porches or downlights fitted in soffits, the property will give a certain amount of protection and these can be rated IP23.

For commercial properties we offer wall and ground light products with improved seals that have a higher rating of IP65. Our IP67 rated products are the most resilient, and can withstand almost all weather conditions.
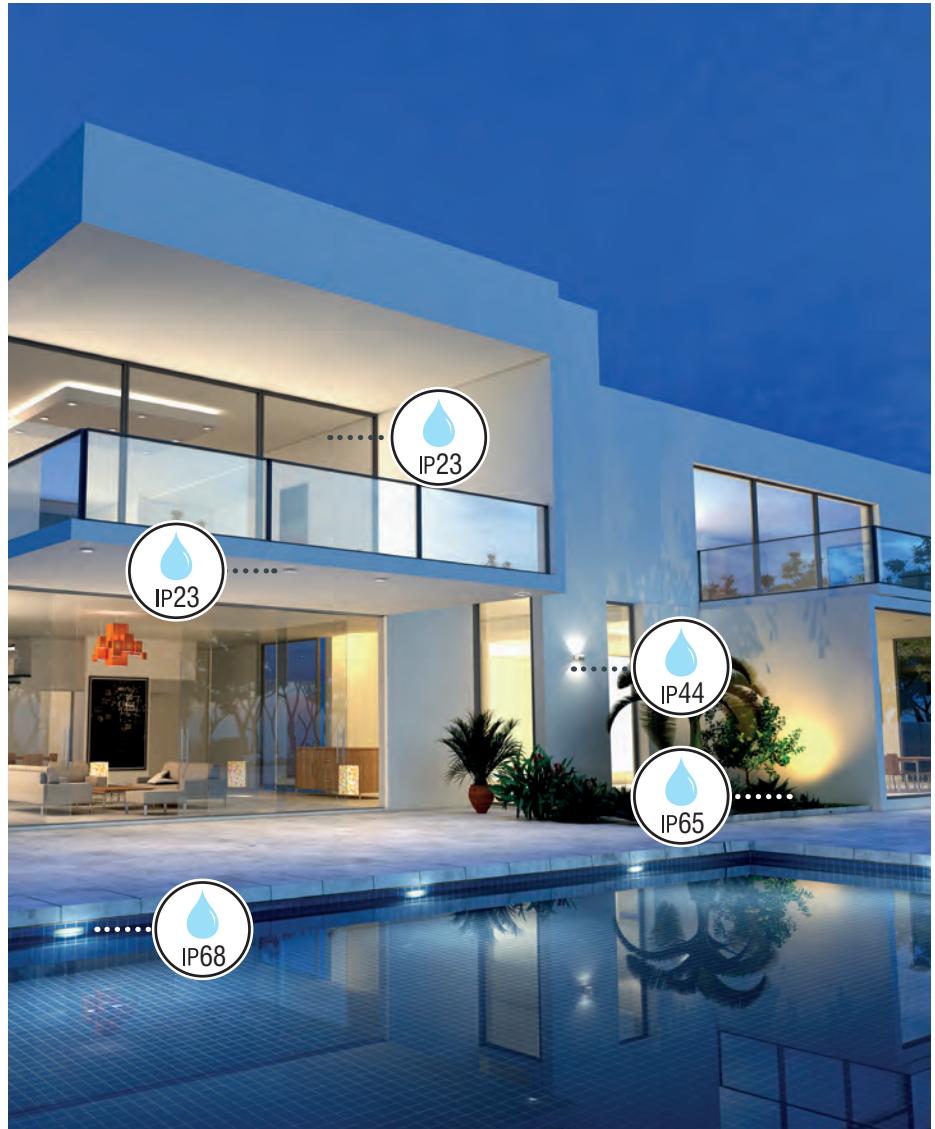

Benefits of LED Lighting

ENERGY EFFICIENCY – The energy saving from an LED lamp is substantial; compared to an incandescent lamp, you will only use around 20% of the energy. They are even more efficient than fluorescent lamps too, saving 20% on the running cost for a similar light output.

MUCH LONGER LIFESPAN - LED lamps have a much longer lifetime, on average 15 times longer than the original incandescent lamps, so they don't need to be replaced as often.

INSTANT LIGHT - Fluorescent energy saving lamps take a long time to reach full brightness, whereas LED alternatives produce light at full intensity instantly.

ENVIRONMENTALLY FRIENDLY - Not only do LED lamps and fittings last much longer, but they use less energy than other light sources.

SAFE - Unlike fluorescent lamps, LED lamps do not contain mercury. This makes them easy to recycle and safe to have around the home too.

LEDs explained

Technology has progressed further, to a point where there is a direct LED equivalent to existing halogen and incandescent lamps. The future is bright too; new technology will see brighter LEDs using even less power than they currently do.

SMD - An established technology now, these LEDs offer a variety of package sizes and light outputs. They are normally used in an array form, to give an even spread of light.

COB - This LED has a number of separate chips embedded in phosphor and mounted on a ceramic package. This gives greatly improved lumens per watt, better cooling and superior light output.

HI POWER - These types of LED offer superior light output, but have higher power requirements. Normally available in 1W or 3W, these require a heatsink to run at the correct temperature.

RGB - Red, green, blue (RGB) LEDs have three separate LEDs embedded in one chip. They allow precise selection for the ultimate in accent lighting.

FILAMENT - The strips of phosphor have tiny LED chips embedded inside. When they are lit, they shine in a similar way to the original incandescent lamps. They are perfect for products with crystal and open shades.

DOB - Driver On Board is a new technology using both SMD and COB LEDs, but without an external driver. The power control circuitry is integrated onto the printed circuit board (PCB) and these are connected directly to the mains power source.

Lamp Data Explained

The lumen figures quoted in the catalogue are for guidance only. The lumen figure is for the entire product and the Lm/W can be used when selecting products which are Part L compliant.

CODE	DESCRIPTION	FINISH	LAMP TEMP	LM	LM/W
52728	shieldLED 800 fixed IP65 11W	Satin Nickel & clear acrylic	Warm White – 3000K	750	68

• K: 3000 Lm: 750 Lm/W: 68

Colour Rendering Index (CRI)

This figure is a percentage and relates to the ability of the lamp or product to show accurate colours when compared to a reference light source. All of our lamps and integrated products have a CRI in excess of 80 and 65 for outdoor lighting.

Energy Saving - All products supplied with a lamp or light source must have a declared energy rating. This can be found on the packaging. The most energy efficient products are rated A++. We also include Lm/W figures for all lamps and products with a light source so you can make an informed choice on the best product for your application.

Building regulations

Part B - This regulation refers to the fire safety requirements that new buildings must meet. Recessed products that break the fire barrier during installation must ensure that they are capable of maintaining the original barrier against fire.
Part C - This regulation covers requirements on the flow of air and moisture in a building.
Part E - This regulation also refers to recessed products and their ability to minimise sound passing through from one part of a property to another.
Part L - This regulation outlines minimum energy efficiency requirements for all commercial and domestic properties. All lights fitted must meet minimum Lm/W requirements.
Part P - This regulation refers to the safe installation of all electrical fittings and lighting and the inspection, testing and certification of a property.

Glossary

ELECTRICAL
a.c. - Is the acronym for alternating current.

d.c. - Is the acronym for direct current.

Watt - This is the amount of energy that a product consumes.

mA - This is the rate of flow of electricity, measured in amps. You would normally come across this as the output of a constant current LED driver.

Volts - The volt is a measure of electric potential. The UK mains voltage is 240V.

Constant current - This refers to the output from an LED driver, in these the current output remains the same, i.e. 350mA, and the voltage increases as the power increases.

Constant voltage - This refers to the output from an LED driver, in these the voltage output remains the same, i.e. 12V, and the current increases as the power increases.

Hertz - This is the unit of frequency. The UK mains a.c. supply voltage is set at 50Hz.

Class 1 - This fitting has basic insulation and relies on an earth connection for safety.

Class 2 - This fitting has two layers of insulation and does not require an earth connection. Often known as double insulated.

Class 3 - Sometimes known as Safety Extra Low Voltage (SELV), the operating voltage of these products is lower than 50V and is isolated from the mains supply.

kWh - 1000W of electricity used over the period of one hour.

Light source

LED - Is the acronym for Light Emitting Diode.

Kelvin - This figure defines the colour temperature of visible light. The units are K.

SDCM - This is an acronym for Standard Deviation Colour Matching and is a way of measuring the differences between LEDs of the same colour. Sometimes called the MacAdam Ellipse.

Lumen - A measure of the quantity of visible light from a lamp or product.

RGB - Is the acronym for red, green and blue for an LED that can change colour .

CRI - Is the acronym for Colour Rendering Index. It relates to the ability of the lamp or product to show accurate colours when compared to a reference light source.

Lux - A measure of the intensity of light, defined as 1lm /m2.

LM80 - This is a standard for measuring the lumen depreciation of a solid state light source.

Efficiency - Lamp and luminaire efficiency is measured in Lm/W. This gives an accurate comparison between different types of fittings for energy usage.

Sensors

PIR - Also known as passive infrared, the sensor detects the heat energy that all living bodies give off. When a person walks in front of the fitting, the sensor detects the change in the radiation and turns on the light.

Photocell - Sometimes known as a dusk to dawn sensor. The sensor reacts to the ambient light and will turn the fitting on when a pre-set light level is reached. The light will remain on until the light increases to another pre-set level where it will turn off.

Microwave - These have a similar operation to the PIR but work by detecting motion. They send a continuous wave of radiation out and if there is any movement in their range they detect the change in frequency and operate the light. They can be fitted internally as the microwaves will pass through some materials, and can even pass through walls.

Infra-red - These are short range movement sensors and are used for hands free operation of lights where you may have wet hands. The IR sensor is a little module with an emitter and a detector, it emits a beam of infra-red (like your TV remote), and when the beam is broken the detector will activate the sensor.

Touch (Resistive) - A resistive touch switch relies on the natural conductivity of the skin and must be used with a conductive material.

Touch (Capacitive) - Capacitive switches have the advantage of being able to work with non-conductive materials such as wood and plastics. These work by using the electrical charge (static electricity) that the human body naturally has. On touching the sensor, the electrical parameters change and the switch will operate.

Miscellaneous

IP - Is the acronym for ingress protection. The first number refers to the dust proofing and the second to the protection against water.

IK - This is the numerical classification for impact protection of outdoor light fittings.

Maintained - Emergency lights that operate as a normal light fitting and can be controlled with all the other lights in the area, however when the power fails the maintained emergency fitting will continue to operate but at a lower light level.

Non Maintained - Is normally switched off, with its batteries being continuously charged and a green LED showing fully charged. When the power fails then the fitting switches on using its battery supply. Non-maintained fittings are not part of the general lighting but are fittings such as emergency exit signs.

Terms & conditions

Whilst every effort has been made to ensure that the information provided in this catalogue is accurate, we do not accept liability for errors or omissions in the descriptions, data, dimensions or any other information in the catalogue. No warranty, express or implied, is given that the information provided in this catalogue is error free. We try to ensure that colours and dimensions are correct at time of print, but these are given for guidance and comparison only and are subject to change without notice. Some of our products are handmade and are therefore subject to natural variation in colour and appearance. As a process of continual improvement, we reserve the right to amend and change the specification of products without notice. Prior to making any structural changes, please ensure physical confirmation of correct dimensions.

All exterior products are covered by our guarantee. Unless specifically defined as high quality marine grade stainless steel, these guarantees are null and void if the products are installed or stored within or near a marine or sea and coastal environments or where there is salt, fertilisers and/or chemical pollution in the environment.

Full terms and conditions available upon request.

Quality statement

Our company is committed to achieving great customer satisfaction by always putting our customers at the heart of everything we do. We are continually developing our systems and processes with the ultimate aim of getting it 'right first time, every time'.

Outdoor lighting

Our cast aluminium, stainless steel and nylon fibre products have a 2 year guarantee against corrosion. These guarantees are null and void if products are installed where there is salt, fertilisers and/or chemical pollution in the air or have been sprayed with chemical cleaners and the product has not been maintained.

Dimmer switches

If your product is dimmable and requires a third party dimmer switch, compatibility is not guaranteed with all Saxby products. For further advice, please contact a qualified electrician or the manufacturer of the dimmer switch you intend to use. Do not use dimmer switches for tubular fluorescent lamps or energy efficient replacement compact fluorescent lamps. The dimmer switch will eventually burn out if used for these applications!

Products incorporating LEDs - A lot of our LED lamps and fittings can now be dimmed and we would recommend using a specific LED dimmer switch. Please verify with us that the product can be dimmed before consulting a qualified electrician or dimmer manufacturer for correct selection of dimmer switch.

Products incorporating Integral Low Voltage Electronic Transformers (G4 halogen lamps) - We do not generally recommend dimming these products, but if dimming is necessary, then a specialised dimmer switch may be required. Please verify with us that the product can be dimmed before consulting a qualified electrician or dimmer manufacturer for correct selection of dimmer switch.

Products Using Mains Voltage Halogen Bulbs (GU10, G9, ECO halogens and Linear Halogen Lamps) - Dimmer switches must not be overloaded. Some dimmer switches are designed to run warm and it is quite usual for the front plate to reach temperatures of approximately 50° Celsius during normal operation. When using halogen lamps make sure that the dimmer is rated at least twice the total wattage of the lamps to be dimmed, e.g. if using 3 x 50w GU10 halogen (150W), then make sure the dimmer is rated at 300W. See table below:

Maximum Load on Dimmer Switch Label	Maximum Load for Mains Halogen
300W	150W
500W	250W
1000W	500W

It is also quite normal to hear a slight buzzing sound coming from the dimmer switch in operation
